Introduction.

InsideOut is a non-profit organisation based in Gothenburg, established in 2025 with a focus on psychosocial development, integration and human potential.

The organisation has grown out of several years of practical work in humanitarian support, integration efforts and psychosocial practice — particularly aimed at children and families affected by migration, trauma and prolonged stress.

These experiences have revealed a structural need in society. Despite a well-developed public system, there is often a lack of interventions that cohesively and on an evidence base strengthen individuals'long-term psychological stability, capacity for action and opportunity for active participation in society.

InsideOut has therefore developed at the intersection of practical experience and evidence-based knowledge. The work integrates perspectives from psychology, pedagogy, medicine and behavioural science, combined with creative and relational methods, to support sustainable human development.

In 2025 the organisation was established and the foundation laid for a structured, interdisciplinary model rooted in both science and practice. InsideOut acts as a complementary actor with the aim of developing and implementing approaches that strengthen individuals' inner resources in concert with social participation and inclusion.

The operational year 2026 marks a transition from building to scaling, deepening and systematising the interventions.

Purpose & goals.

The goal for 2026 is to establish InsideOut as a multidimensional centre for human development and social sustainability, where the individual's inner growth forms a foundation for long-term societal change.

InsideOut starts from the premise that societies are shaped by how people think, feel, act and relate to one another. The individual's ability to handle stress, make decisions, take responsibility, cooperate and form functioning relationships is therefore not merely a private matter — it is a decisive factor in how social structures arise, stabilise and develop over time.

The work aims to strengthen these capacities through interventions at several levels — from the development of foundational psychosocial skills to deeper processes for self-insight, behavioural change and meaning-making.

The work encompasses what is often referred to as "soft skills" — self-awareness, emotional regulation, communication and collaboration — as well as more complex capacities linked to responsibility, creativity, leadership and innovation.

Integrating these perspectives creates the conditions for greater self-awareness, improved mental and physical health, stronger interpersonal relationships and a deeper sense of belonging and context.

This in turn strengthens the individual's ability to contribute constructively across different social contexts.

The starting point is that people are not only shaped by society — they actively shape it through their actions, relationships and daily decisions. By systematically strengthening individual capacity — on both a personal and relational level — better conditions are created for social cohesion, increased participation, sustainable development and the broader capacity for innovation in society.

THREE ACTIVITY AREAS

01
Next Generation
Children & family

02
Personal Evolution
Individual development

03
Connected Society
Relationships & collaboration

Activity areas.

InsideOut's work is grounded in an insight from modern research in psychology, neuroscience and social systems: that individuals' inner processes and society's outer structures are mutually dependent. How people experience, interpret and handle their inner world shapes their behaviours, relationships and decisions — which in turn form the social systems and structures we live in.

From this perspective, sustainable societal development cannot happen through external change alone; it also needs development at the individual level. Capacities such as self-regulation, empathy, cognitive flexibility, cooperation and meaning-making are central both to the individual's wellbeing and to society's long-term function and capacity for innovation.

The work is organised into three interdependent areas that together form a cohesive whole. By working in parallel at every level, long-term change becomes possible — where individual development contributes to stronger relationships and to more sustainable, inclusive and innovative societies.

01 **Next Generation**

Children and families — where the foundation is formed. Nova Klubb & Bright Minds.

02 **Personal Evolution**

Individual development — Healing Beyond Fear, The Shift, Conscious Creator.

03 **Connected Society**

People meeting and shaping social structures — Wisdom Wheels & Hero Journey.

Next Generation. *

This area gathers the work directed at children and families — the foundation of InsideOut's activity.

Two complementary programmes run within the area — Nova Klubb as an established activity and Bright Minds as a pilot — together meeting both broad and specialised needs among children and families.

TWO PROGRAMMES — ESTABLISHED & PILOT

01 · programme · established

Nova Klubb

320+ children & 200+ families from Ukraine

02 · programme · new 2026

Bright Minds

Pilot groups · focus, self-regulation & social interaction

Next Generation

01 · programme · established

Nova Klubb.

320+ children & 200+ families from Ukraine

Through Nova Klubb the organisation has established a stable activity where over 320 children and more than 200 families from Ukraine participate regularly. Safe, inclusive and meaningful contexts are created here, where children and families can build relationships, strengthen their sense of participation and develop social skills.

Activities include culture, movement, creative expression and family-focused interventions, with a clear focus on psychosocial wellbeing and integration.

02 · programme · new 2026

Bright Minds.

Pilot groups 2026 · focus, self-regulation & social interaction

In parallel, Bright Minds is being developed — a targeted programme for children and young people who need support in developing focus, impulse control and emotional regulation. The programme responds to a growing need for practical and accessible interventions for children with neuropsychiatric difficulties or similar challenges, where existing resources are often limited.

The work is based on individually tailored development interventions that strengthen children's functional skills in everyday life, such as concentration, self-regulation, structure and social interaction. Interventions are delivered both individually and in small groups, enabling the practice of social skills in a safe and structured environment.

The programme combines pedagogical and psychological methods with movement and creative activities, creating a holistic developmental environment where children's ability to function across contexts is strengthened over time. The work is carried out in close collaboration with families and, where possible, with schools, to ensure continuity and long-term effect.

Bright Minds launches as a new direction during 2026, with an initial focus on pilot groups and continued methodological development.

Personal Evolution. *

This area focuses on the individual's development and capacity to understand oneself, take direction and translate insight into action.

The starting point is that how people think, react and act shapes both their own lives and the contexts they are part of. By working with these processes in a conscious and structured way, the individual's capacity to handle life's complexity is strengthened.

Within this area, three complementary programmes are developed — a progression from handling and understanding, to changing, and finally creating and leading.

THREE PROGRAMMES — A PROGRESSION

i · handle

Healing Beyond Fear

ii · change

The Shift

iii · create & lead

Conscious Creator

Personal Evolution.

i · handle

Healing Beyond Fear.

A programme that creates the conditions for meeting and working through fear, stress and past experiences.

The focus is on strengthening the individual's inner stability and creating space for growth, rather than becoming stuck in limiting patterns.

ii · change

The Shift.

A programme focused on change in practice — how people can break ingrained thought and behaviour patterns and begin to act more consciously in their lives.

The programme integrates knowledge from neuroplasticity, mindfulness and evidence-based psychological methods to strengthen the individual's self-awareness and mental flexibility.

Through structured reflection, attention training and concrete tools, the individual develops the ability to observe their own patterns of thought, regulate their reactions and gradually form new, more functional ways of thinking and acting. The work aims to create lasting change by strengthening the brain's capacity for restructuring alongside greater mindful presence and psychological understanding.

iii · create & lead

Conscious Creator.

A programme that integrates self-leadership, creative expression and the capacity for action.

The focus is on moving from insight to concrete action, where the individual not only develops self-understanding but also translates it into direction, initiative and creation.

The programme combines principles from leadership development, behavioural science and creative processes, aiming to strengthen the individual's ability to make conscious decisions, take responsibility for their direction and act in line with their values.

It encompasses both personal development and the ability to lead oneself and others in complex contexts.

By integrating reflection, practical work and creative processes, the individual develops the capacity to contribute actively in their own life and in the contexts they are part of.

The programmes develop gradually across the year with a focus on pilot interventions and method development. Together they form a progression — from handling and understanding, to changing, creating and leading.

i → ii → iii

Connected Society. *

This area focuses on relationships between people and how social contexts can be developed to create more cohesive and inclusive societies.

The starting point is that many of today's societal challenges are not only about resources, but about a lack of contact, understanding and shared arenas between people. When people live parallel lives without natural meeting points, both trust and social cohesion weaken.

By creating structured contexts for meaningful interaction, new relationships, perspectives and forms of collaboration can develop.

TWO PROJECTS — MEETING & REFLECTION

01 · project · central

Wisdom Wheels

Across generations & cultures

02 · game · digital + analog

Hero Journey

Reflection + interaction

Connected Society

01 · project · central

Wisdom Wheels. Across generations & cultures

Wisdom Wheels is a central project within this area. Through activities where elderly, young people and newcomers meet in shared experiences, space is created for conversation, exchange of experience and greater understanding across generations and cultures.

The project is delivered in collaboration with elderly care, civil society and integration actors, serving as a model for how social meeting places can be developed over time in a structured way.

02 · game · digital + analog

Hero Journey. Reflection + interaction

An innovative game tested in both digital and analog form.

Through structured tasks and interactive moments, conditions are created for greater self-reflection, awareness of behavioural patterns and connection between individuals — even across group and context boundaries.

Through an accessible and engaging format, the concept strengthens both inner development and interpersonal relationships.

In summary, the area aims to strengthen social bonds, increase participation and contribute to more cohesive and sustainable societies.

Organisation & execution.

InsideOut is run by an interdisciplinary team with expertise in psychology, pedagogy, medicine and social work. During 2026 the focus is on gradually building the organisation as the work develops, through recruitment of key competencies and collaboration with external specialists.

Work is organised into teams linked to each activity area, with clear responsibility and continuous follow-up.

Collaboration.

The work is delivered in collaboration with actors in the public sector and civil society — schools, healthcare providers, non-profit organisations and municipal services. Collaboration is a central part of the work, enabling both breadth of reach and long-term anchoring.

Schools | Healthcare | Municipality | Civil society | Elderly care | Integration actors

Expected results 2026.

During 2026 the work is expected to develop further through a combination of deepening, pilot interventions and the establishment of new structures. At the individual level, the interventions are expected to contribute to greater psychological stability, improved social skills and stronger independence and capacity for action.

Participation in social contexts is also expected to grow, creating the conditions for both personal development and more active engagement in society.

InsideOut works with a two-level follow-up model: activity goals (what we do) and outcome goals (what changes for participants). Both are measured systematically.

Activity goals

what we do

GOAL	METRIC (KPI)	TARGET 2026
Reach	Number of active participants	At least 600 unique participants during 2026
Activity volume	Number of activities delivered	60+ activities; at least 1 per week
Programme delivery	Number of pilot programmes started	Bright Minds + The Shift running from Q2
Collaboration	Number of external partners	At least 5 active partners (schools, healthcare, municipality)
Documentation	Ongoing follow-up per programme	100% of programmes with pre/post measurement

Outcome goals.

What actually changes — measured via validated short-form assessments at programme start and end (e.g. SDQ for children, PSS for adults, adapted self-assessments). Specific instruments are defined per programme.

GOAL	METRIC (KPI)	TARGET 2026
Children: regulation	SDQ score (emotional symptoms)	Statistically significant improvement in 60%+ of Bright Minds participants
Children: social function	Teacher / parent report on everyday functioning	Improvement in at least 2 of 3 areas (school, home, leisure) for 65%
Adults: stress level	PSS-10 (Perceived Stress Scale)	Average reduction ≥15% at programme end (The Shift)
Adults: capacity for action	Self-rated capacity for action	80% report concrete change in an identified life area
Integration	Participants'perceived belonging in Gothenburg	≥70% of Nova Klubb families report a greater sense of belonging
Meeting places	Participants in intergenerational activities	100% of programmes with pre/post measurement

Long-term direction.

InsideOut's long-term goal is to develop and establish a model for human development that can be implemented and adapted across municipalities, organisations and societal contexts.

The starting point is that many of today's societal challenges — in mental health, integration and social cohesion — cannot be met through existing structures alone; they also require ways of working that more fully account for people's inner conditions. This perspective is supported by research in psychology, neuroscience and social systems, where the link between individual inner capacity and societal outcomes is becoming increasingly clear.

Within this landscape, InsideOut acts as an innovation actor focused on developing, testing and advancing methods and environments that put individual capacity, relationships and participation at the centre. The work takes a knowledge-based approach and integrates insights from behavioural science, learning theory and psychological research.

By strengthening people's capacity for self-understanding, handling complexity and acting constructively across contexts, conditions can be created for more sustainable social structures.

In the longer term, InsideOut aims to contribute to the development of more coherent and lasting ways of working in society, where collaboration, responsibility and mutual interdependence between actors are made explicit.

Investment in human development is therefore seen as central to creating societies that function and remain resilient over the long term.

This includes developing forms of collaboration between the public sector, civil society and other societal actors, as well as models that strengthen both individuals'and groups' capacity to contribute to shared solutions.

InsideOut proceeds from the understanding that sustainable societal development is not only about systems and resources, but about people's capacity to use them consciously and responsibly.

The ambition is to establish InsideOut over time as a platform where practical work, methodological development and collaboration come together — and where experiences from the work contribute to further development of more inclusive, knowledge-based and sustainable societal models.

Thank you.

"We are many voices, many professions and many journeys — united in the conviction that healing begins from within. Let us join our forces and together create a world built on resilience, compassion and human potential."
